

define Array

`<data-type> <var_name> [<size>];`

✓ `int arr[2];`

✓ `string arr[5]`

✓ `float arr[5]`

Searching
in an array

```
int N = 5  
int arr[N];
```

(2) (3) (1) (4) (5)

arr →

0	1	2	3	4
2	3	1	4	5

 ← arr[4]

arr[0] arr[1] arr[2] arr[3]

Data Insert:-

```
for (int i = 0; i < N; i++) {  
    cin >> arr[i];  
}
```

i	arr[i]
0	arr[0]
1	arr[1]
2	arr[2]
3	arr[3]
4	arr[4]

searching
int x = 4;

```

int key = -1;
for (int i = 0; i < N; i++) {
    if (arr[i] == x) {
        cout << "Present at " << i << endl;
        break;
    }
}
  
```

$$x = 4$$

```
for (int i = 0; i < N; i++) {  
    if (arr[i] == X) {  
        cout << X << " is Present at " << i << endl;  
        break;  
    }  
    else {  
        cout << X << "is not present" << endl;  
    }  
}
```

i
~~0~~ |

X << "is not present" << endl;

N=5

N

arr →

2	3	4	4	5
---	---	---	---	---

 ← arr[4]

arr[0] arr[1] arr[2] arr[3]

l k

```

// X: element to be searched for
int search(int arr[], int N, int X)
{
    for(int i = 0; i < N; i++) {
        if(arr[i] == X) {
            return i;
        }
    }

    return -1;
}

```

$i = -1$

$X = 2$ $N = 4$

0	1	2	3
1	2	1	4

$i = 0 \ 1 \ 2$

To implement program
from scratch

Input

Process

Output

Sum of Array

Hint

0	1	2	3	4
4	2	1	3	6

$$\text{sum} = \text{arr}[0] + \text{arr}[1] + \dots + \text{arr}[4]$$

C++ compiler

N=5

0	1	2	3	4
4	2	1	3	6

coding Exp. (user)

sum

i

0	0

left right

```
int sum = 0;
for (i = 0; i < n; i++) {
    sum = sum + arr[i]
}
```

Parhna kya ha → Memory Allocation in C++

}

// block of memory.

}

eg:-

```
for (int i = 0; i < n; i++) {
```

// Block

```
}
```

```
if (condition) {
```

// Block

```
}
```

```
while (condn) {
```

// block

```
}
```

Variables defined inside a block will be destroyed from the memory when the block ends.

Maximum element in array

OR

```
int largest(vector<int> &arr, int n)
{
    int max = arr[0];
    for(int i=0; i<n; i++){
        if(max < arr[i]){
            max = arr[i];
        }
    }
    return max;
}
```

Logical operator
0/1

arr

0	1	2	3
3	2	7	5

Dry Run

memory

max	7
i	3

Input

* $n \leftarrow$ size of array

* `int arr[n]`

Process

* `max \leftarrow arr[0]`

* Find maximum

Output

* maximum element print karo

Count of smaller elements \rightarrow gfg.

$x = 9$

count

0

1

2

3

4

5

```
if (x >= arr[i]) {  
    count++;  
}
```

```
else {  
    break;  
}
```

\swarrow This can be used because of sorted property of array
